

## User Testing for Developer's Journal

### Tasks:

1. Make a reflection on your day
2. Delete the reflection you made
3. Go back to the Home page
4. Add an event to your schedule of today
5. Mark it as "completed"
6. Delete the event you just completed
7. Add an event to your schedule of June 10th 10 a.m.
8. Check how many tasks you have for June 10th on the calendar
9. Add a project to track your progress
10. Mark complete of your progress for the project

### Questions:

1. Any confusions you find when using the Developer's Journal?

I don't know how to go back home on the first page, the colour of the space plane is indistinguishable.

2. Any features you don't like about and why?

For the project part, it should add a button to make it as complete rather than towing the progress bar.

3. Any functions you think are redundant and why?

Schedule of the day and reflect of the day confused me at first

4. Any appearances/visual components you don't like about and why?

The changing colour of the space plane, it puzzled me

5. What are the features that you think are useful for a developer's use but we don't cover it in our product?

The commits progress tracking system.

## User Testing for Developer's Journal

### Tasks:

1. Make a reflection on your day
2. Delete the reflection you made
3. Go back to the Home page
4. Add an event to your schedule of today
5. Mark it as "completed"
6. Delete the event you just completed
7. Add an event to your schedule of June 10th 10 a.m.
8. Check how many tasks you have for June 10th on the calendar
9. Add a project to track your progress
10. Mark complete of your progress for the project

### Questions:

1. Any confusions you find when using the Developer's Journal?

I don't know how to update the progress of the project tracker without any hint or instructions. I also don't know the difference between your day and your month by looking at the planets.

2. Any features you don't like about and why?

When I write reflection, there's no submit or save button, so I don't know if it's saved or not. The checkmark doesn't change a lot when I click on it, so I can't feel the joy of completing tasks.

3. Any functions you think are redundant and why?

Schedule your month and your day, they sounded very similar to me.

4. Any appearances/visual components you don't like about and why?

The event I made to schedule your day has a very tiny font. The delete button is also too tiny to see.

5. What are the features that you think are useful for a developer's use but we don't cover it in our product?

I would like to share my journal sometimes, but this demo doesn't have features like that.

## User Testing for Developer's Journal

### Tasks:

1. Make a reflection on your day
2. Delete the reflection you made
3. Go back to the Home page
4. Add an event to your schedule of today
5. Mark it as "completed"
6. Delete the event you just completed
7. Add an event to your schedule of June 10th 10 a.m.
8. Check how many tasks you have for June 10th on the calendar
9. Add a project to track your progress
10. Mark complete of your progress for the project

### Questions:

1. Any confusions you find when using the Developer's Journal?

For task 1, when I choose the emojis, it looks like I already made the reflection and I can't edit it, so I added more reflections and the emojis started to cover the reflections.

2. Any features you don't like about and why?

The schedule of your day page should allow users to edit, also sort their events. When the event is made, the only way to change it is to delete it, that is not flexible.

3. Any functions you think are redundant and why?

No redundant functions, but the buttons should be more obvious so I can understand their purpose.

4. Any appearances/visual components you don't like about and why?

Track your project page looks too simple to me, I want to see the deadlines and percentages of completeness of my project, and it should be able to sort the projects by their deadline.

5. What are the features that you think are useful for a developer's use but we don't cover it in our product?

Have edit/save/delete buttons
